基础大纲词　精读补充词　核心重难词
常考大纲短语　核心精读短语　考点长难句

P1 ① In the idealized version of how science is done, facts about the world are waiting to be observed and collected by objective researchers who use the scientific method to **carry out** their work. ② But in the everyday practice of science, discovery frequently follows an ambiguous and complicated route. ③ We **aim to** be objective, but we cannot escape the context of our unique life experience. ④ Prior knowledge and interests influence what we experience, what we think our experiences mean, and the subsequent actions we take. ⑤ Opportunities for misinterpretation, error, and self-deception abound.

①在关于科学研究的理想化图景中，世间万物的事实静待客观的研究者去观察和收集，而这些研究者会运用科学方法来开展工作。②然而在科学的日常实践中，发现往往走的是一条模糊而曲折的道路。③我们力求客观，却无法摆脱自身独特生活经历所构成的背景。④已有的知识和兴趣会影响我们的所见所闻、我们对自身经历意义的理解，以及我们随后采取的行动。⑤误解、错误和自我欺骗的可能性比比皆是。

P2 ① Consequently, discovery claims should **be thought of as** protoscience. ② **Similar to** newly **staked** mining **claims**, they **are full of** potential. ③ But it takes collective scrutiny and acceptance to **transform** a discovery claim **into** a mature discovery. ④ This is the credibility process, through which the individual researcher's me, here, now becomes the community's anyone, anywhere, anytime. ⑤ Objective knowledge is the goal, not the **starting point**.

①因此，各种发现的主张应当被视为原始科学。②它们就像新登记的采矿权一样，充满潜力。③但要把一项发现主张变成一项成熟的发现，还需要集体的审视与接受。④这就是可信度形成的过程，通过它，研究者个人的“此时此地的我”变成了共同体的“任何人、任何地方、任何时候”。⑤客观知识是目标，而不是起点。

P3 ① Once a discovery claim becomes public, the discoverer receives intellectual credit. ② But, unlike with mining claims, the community **takes control of** what happens next. ③ Within the complex social structure of the scientific community, researchers make discoveries; editors and reviewers **act as** gatekeepers by controlling the publication process; other scientists use the new finding to suit their own purposes; and finally, the public (including other scientists) receives the new discovery and possibly accompanying technology. ④ As a discovery claim **works its way through** the community, the interaction and confrontation between shared and competing beliefs about the science and the technology involved **transforms** an individual's discovery claim **into** the community's credible discovery.

①一旦某项发现主张公之于众，发现者便获得学术上的认可。②但与采矿权不同的是，接下来发生什么由共同体掌控。③在科学共同体这一复杂的社会结构中，研究者作出发现；编辑和审稿人通过掌控发表过程充当把关人；其他科学家利用这些新发现来服务于自身目的；最终，公众（包括其他科学家）获知这些新发现以及可能随之而来的技术。④当一项发现主张在共同体中逐步传播时，围绕相关科学与技术的共有信念和相互竞争的信念之间的互动与交锋，会把个人的发现主张转变为共同体所认可的可信发现。

P4 ① Two paradoxes exist throughout this credibility process. ② First, scientific work **tends to focus on** some aspect of prevailing knowledge that **is viewed as** incomplete or incorrect. ③ Little reward accompanies duplication and confirmation of what is already known and believed. ④ The goal is new-search, not re-search. ⑤ Not surprisingly, newly published discovery claims and credible discoveries that **appear to be** important and convincing will always **be open to** challenge and potential modification or refutation by future researchers. ⑥ Second, novelty itself frequently provokes disbelief. ⑦ **Nobel Laureate** and physiologist **Albert Szent-Györgyi** [人名]阿尔伯特·圣捷尔吉（匈牙利生物化学家，1937 年获诺贝尔奖） once described discovery as "

①这一可信度形成过程中始终存在两个悖论。②第一，科学工作往往聚焦于现行知识中被视为不完整或不正确的某个方面。③对已知已信之事进行重复和确认，几乎得不到什么回报。④目标是“新探”，而不是“复查”。⑤毫不奇怪，新发表的发现主张，以及那些看似重要且令人信服的可信发现，都始终有可能受到后来研究者的挑战，并可能被修正或推翻。⑥第二，新颖本身常常会引发怀疑。⑦诺贝尔奖得主、生理学家阿尔伯特·圣捷尔吉曾把发现描述为“看到人人都看到的东西，想到无人想到的东西”。⑧然而，想到别人没想到的东西，并把别人所忽视的告诉他们，未必能改变他们的看法。⑨有时，真正新颖的发现主张要等到多年之后才被人们接受和认可。

seeing what everybody has seen and thinking what nobody has thought." ⑧ But thinking what nobody else has thought and telling others what they have missed may not change their views. ⑨ Sometimes years are required for truly novel discovery claims to be accepted and appreciated.

P5 ① **In the end**, credibility " happens " to a discovery claim – a process that **corresponds to** what philosopher **Annette Baier** has described as the commons of the mind. ② " We reason together, challenge, revise, and complete **each other**'s reasoning and **each other**'s conceptions of reason. "

①归根到底，可信度是“发生”在发现主张之上的——这一过程恰好契合哲学家安妮特·拜尔所说的“心智的公地”。②“我们共同推理，相互挑战、修正并完善彼此的推理以及彼此对理性的理解。”

Q1. **According to** the first paragraph, the process of discovery **is characterized by** its_____. 细节题

[A] uncertainty and complexity

[B] misconception and deceptiveness

[C] logicality and objectivity

[D] systematicness and regularity

根据第一段，“发现”的过程具备_____特点。

A.不确定性和复杂性

B.错误的概念和欺骗性

C.逻辑性和客观性

D.系统性和常规性

Q2. It can be inferred from Paragraph 2 that credibility process requires_____. 细节题

[A] strict inspection

[B] shared efforts

[C] individual wisdom

[D] persistent innovation

从第二段可推知，“取信过程”需要_____。

A.严格的审查

B.共同的努力

C.个人的智慧

D.不断的创新

Q3. Paragraph 3 shows that a discovery claim becomes credible after it_____. 细节题

[A] has attracted the attention of the general public

[B] has been examined by the scientific community

[C] has received recognition from editors and reviewers

[D] has been frequently quoted by peer scientists

第三段表明，“发现声明”在_____之后变得可信。

A.吸引到大众的注意

B.被科学界审查

C.获得编辑和审稿者认可

D.经常被同行科学家引用

Q4. **Albert Szent-Györgyi** would most likely agree that_____. 细节题

[A] scientific claims will survive challenges

[B] discoveries today inspire future research

[C] efforts to make discoveries are justified

[D] scientific work **calls for** a critical mind

Albert Szent-Györgyi最有可能同意_____。

A.科学声明将经受住质疑

B.今天的发现将激发未来的研究

C.研究发现所做的努力是合理的

D.科学研究需要批判性思维

Q5. Which of the following would be the best title of the text? 主旨题

[A] Novelty as an Engine of Scientific Development

[B] Collective Scrutiny in Scientific Discovery

[C] Evolution of Credibility in Doing Science

[D] Challenge to Credibility at the Gate to Science

下面哪项为文章的最佳标题？

A.新颖是科学发展的引擎

B.科学发现中的集体审查

C.科学研究中可信度的发展

D.在通往科学的大门口对于信任的质疑
