【英语一】 2005 阅读 Text3

基础大纲词 | 精读补充词 | 核心重难词
常考大纲短语 | 核心精读短语 | 考点长难句

P1 ① Of all the components of a good night's sleep, dreams seem to be least within our control. ② In dreams, a window opens into a world where logic is suspended and dead people speak. ③ A century ago, Freud formulated his revolutionary theory that dreams were the disguised shadows of our unconscious desires and fears; by the late 1970s, neurologists had switched to thinking of them as just "mental noise"— the random byproducts of the neural-repair work that goes on during sleep. ④ Now researchers suspect that dreams are part of the mind's emotional thermostat, regulating moods while the brain is "off-line." ⑤ And one leading authority says that these intensely powerful mental events can be not only harnessed but actually brought under conscious control, to help us sleep and feel better. ⑥ "It's your dream," says Rosalind Cartwright, chair of psychology at Chicago's Medical Center. ⑦ "If you don't like it, change it."

①在构成良好睡眠的所有要素中，梦似乎最不受我们的控制。②在梦里，一扇窗打开了，通向一个逻辑被搁置、逝者也能开口说话的世界。③一个世纪前，弗洛伊德提出了他那个革命性的理论：梦是我们潜意识中欲望和恐惧的伪装投影；到20世纪70年代末，神经学家转而认为梦不过是“精神噪音”——是睡眠期间进行的神经修复活动所产生的随机副产品。④如今，研究人员猜测，梦是大脑情绪调节器的一部分，在大脑“离线”期间调节人的情绪。⑤一位权威学者指出，这些强烈而有力的心理活动不仅可以被利用，实际上还能置于我们的意识控制之下，从而帮助我们改善睡眠、感觉更好。⑥芝加哥医学中心心理学系主任罗莎琳德·卡特赖特说：“梦是你自己的。”⑦“如果你不喜欢它，就去改变它。”

P2 ① Evidence from brain imaging supports this view. ② The brain is as active during REM (rapid eye movement) sleep—— when most vivid dreams occur—— as it is when fully awake, says Dr. Eric Nofzinger at the University of Pittsburgh. ③ But not all parts of the brain are equally involved; the limbic system (the "emotional brain") is especially active, while the prefrontal cortex (the center of intellect and reasoning) is relatively quiet. ④ "We wake up from dreams happy or depressed, and those feelings can stay with us all day," says Stanford sleep researcher Dr. William Dement.

①来自脑成像的证据支持了这一观点。②匹兹堡大学的埃里克·诺夫辛格博士说，在快速眼动（REM）睡眠期间——也就是大多数生动的梦境出现的时候——大脑的活跃程度与完全清醒时一样。③但并非大脑的所有部分都同样参与其中；边缘系统（“情绪脑”）尤其活跃，而前额叶皮层（智力与推理的中枢）则相对沉寂。④斯坦福大学睡眠研究者威廉·迪蒙特博士说：“我们从梦中醒来时或喜悦或沮丧，这些情绪会伴随我们一整天。”

P3 ① The link between dreams and emotions shows up among the patients in Cartwright's clinic. ② Most people seem to have more bad dreams early in the night, progressing toward happier ones before awakening, suggesting that they are working through negative feelings generated during the day. ③ Because our conscious mind is occupied with daily life we don't always think about the emotional significance of the day's events,— until ,it appears, we begin to dream.

①梦与情绪之间的这种关联，在卡特赖特诊所的病人身上有所体现。②大多数人似乎在夜晚早段做的噩梦较多，临近醒来时梦境逐渐变得愉快，这表明他们正在消化白天产生的负面情绪。③因为我们清醒时的头脑被日常琐事占据，所以并不总会去思考白天发生的事情在情绪上的意义——似乎要等到我们开始做梦时，这种思考才会出现。

P4 ① And this process need not be left to the unconscious. ② Cartwright believes one can exercise conscious control over recurring bad dreams. ③ As soon as you awaken, identify what is upsetting about the dream. ④ Visualize how you would like it to end instead; the next time it occurs, try to wake up just enough to control its course. ⑤ With much practice people can learn to, literally, do it in their sleep.

①而这一过程并不一定非要交给潜意识去完成。②卡特赖特相信，人可以对反复出现的噩梦施加有意识的控制。③一醒来，就辨认出梦中令你不安的地方。④在心里想象你希望它如何收尾；下次这个梦再出现时，试着让自己刚好醒到能够掌控梦境走向的程度。⑤经过大量练习，人们真的可以学会在睡梦中做到这一点。

P5 ① **At the end of the day**, there's probably little reason to **pay attention to** our dreams **at all** unless they **keep** us **from** sleeping or "we **wake up** in a panic," Cartwright says. ② Terrorism, economic uncertainties and general feelings of insecurity have increased people's anxiety. ③ Those **suffering from** persistent nightmares should seek help from a therapist. ④ For **the rest of** us, the brain has its ways of **working through** bad feelings. ⑤ Sleep —or rather dream— on it and you'll feel better in the morning.

①卡特赖特说，说到底，我们其实几乎没有必要去在意自己的梦，除非梦让我们无法入睡，或者“我们从梦中惊慌地醒来”。②恐怖主义、经济上的不确定性以

Q1. Researchers have **come to** believe that dreams_____. 细节题

[A] can be modified in their courses

[B] are susceptible to emotional changes

[C] reflect our innermost desires and fears

[D] are a random outcome of neural repairs

研究人员已经开始相信，梦是_____。

A.在形成过程中可以被改变

B.易受情绪变化的影响

C.反映了我们内心深处的欲望和恐惧

D.是神经修复的随机结果

Q2. By **referring to** the limbic system, the author **intends to** show_____. 例证题

[A] its function in our dreams

[B] the mechanism of REM sleep

[C] the relation of dreams to emotions

[D] its difference from the prefrontal cortex

作者通过提到大脑边缘系统意在说明_____。

A.它在我们梦中的功能

B.快速眼动睡眠的机制

C.梦与情绪的关系

D.它与前额皮层的区别

Q3. The negative feelings generated during the day **tend to**_____. 细节题

[A] aggravate in our unconscious mind

[B] develop into happy dreams

[C] persist till the time we **fall asleep**

[D] **show up** in dreams early at night

白天产生的负面情绪往往_____。

A.在潜意识中加剧

B.变成令人愉快的梦

C.一直持续到我们睡着

D.出现于前半夜的梦里

Q4. Cartwright **seems to** suggest that____. 细节题

[A] **waking up in time** is essential to the ridding of bad dreams

[B] visualizing bad dreams helps **bring** them **under control**

[C] dreams should be left to their natural progression

[D] dreaming may not entirely **belong to** the unconscious

卡特莱特似乎表明_____。

A.及时醒来对于摆脱噩梦至关重要

B.想象噩梦有助于控制噩梦

C.应该让梦顺其自然地发展

D.做梦可能不完全属于无意识行为

Q5. What advice might Cartwright give to those who sometimes have bad dreams? 细节题

[A] Lead your life **as usual**

[B] Seek professional help

[C] Exercise conscious control

[D] Avoid anxiety in the daytime

卡特莱特会给那些有时做噩梦的人什么建议？

A.如往常一样生活

B.寻求专业帮助

C.实施有意识地控制

D.在白天避免焦虑
