【英语一】 2007 阅读 Text2

基础大纲词 精读补充词 核心重难词
常考大纲短语 核心精读短语 考点长难句

P1 ① For the past several years, the Sunday newspaper supplement(增刊) Parade(展示) has featured(以…作为特色) a column(专栏) called "Ask Marilyn." ② People are invited to query(提问) **Marilyn Vos Savant**([人名]玛丽琳·沃斯·萨文特), who at age 10 had tested at a mental level of someone about 23 years old; that gave her an IQ of 228— the highest score(分) ever recorded. ③ IQ tests **ask**(让某人做某事) you **to** complete verbal(语言的) and visual(视觉的) analogies(类比), to envision(想象) paper after it has been folded and cut, and to deduce(推论) numerical(数字的) sequences(序列), among other similar tasks. ④ So it is a bit confusing when **Vos Savant**([人名]沃斯·萨文特) fields such queries(疑问) from the average(普通的) Joe (whose IQ is 100) as, What's the difference between love and fondness Or what is the nature of luck and coincidence?(巧合) ⑤ It's not obvious(明确的) how the capacity(能力) to visualize(想象) objects and to **figure out**(想出,理解,明白) numerical(数字的) patterns(排列) suits one to answer questions that have eluded(把[某]) **some of**(一些) the best poets and philosophers(哲学家).

①过去几年里，周日报纸副刊《大观》一直开设着一个名为“询问玛丽莲”的专栏。②读者可以向玛丽莲·沃斯·萨万特提问，她10岁时做的智力测试显示其心智相当于23岁左右的成年人，由此测得智商高达228，是迄今最高纪录。③智商测试要求你完成语言和图形类比、想象纸张被折叠和剪裁后的样子、推断数列规律，以及诸如此类的其他任务。④因此，当沃斯·萨万特处理来自普通大众（其智商为100）的诸如“爱和喜欢有什么区别？”或者“运气和巧合的本质是什么？”之类的问题时，这多少有点令人费解。⑤想象物体和推算数字模式的能力，究竟如何使一个人能够回答那些甚至曾难倒一些最优秀诗人和哲学家的问题，这一点尚不明确。

P2 ① Clearly, intelligence(智力) encompasses(包含) more than a score(分数) on a test. ② Just what does it mean to be smart ? ③ How much of intelligence(智力) can be specified(明确), and how much can we **learn about**(学习关于) it from neurology(神经学), genetics(遗传学), **computer science**(计算机科学) and other fields ?

①显然，智力所包含的远不止一次测试的分数。②所谓聪明，究竟意味着什么？③智力在多大程度上可以被确切界定？我们又能从神经学、遗传学、计算机科学及其他领域中了解多少关于智力的问题？

P3 ① The defining(起决定性作用的) term of intelligence(智力) in humans still **seems to**(似乎) be the IQ score(得分), **even though**(虽然,尽管) IQ tests are not given **as**(像…一样, 同…一样) often **as** they **used to**(过去常常) be. ② The test comes primarily in two forms: the **Stanford-Binet Intelligence Scale**(斯坦福-比内智力量表) and the **Wechsler Intelligence Scales**(韦克斯勒智力量表) (both come in adult and children's version(版本)). ③ Generally costing several hundred dollars, they are usually given only by psychologists, although variations(改编) of them populate(充斥于) bookstores and the **World Wide Web**(互联网). ④ Superhigh scores(得分) like **Vos Savant**'s([人名]沃斯·萨文特) are **no longer**(不再) possible, because scoring(评分) is now **based on**(根据) a statistical population distribution among age peers(同龄人), **rather than**(不是…而是) simply **dividing**(用…去除) the mental age **by** the **chronological age**(实龄) and **multiplying by**(乘) 100. ⑤ Other standardized(标准化的) tests, **such as**(诸如…之类) the **Scholastic Assessment Test**(学术评估测试（SAT）) (SAT) and the **Graduate Record Exam**(研究生入学资格考试（GRE）) (GRE), capture(包含) the main aspects(方面) of IQ tests.

①尽管如今智商测试的使用频率已不如从前，但用来定义人类智力的指标似乎仍然是智商分数。②这类测试主要有两种形式：斯坦福-比奈智力量表和韦克斯勒智力量表（两者均有成人版和儿童版）。③这些测试一般收费数百美元，通常只由心理学家来实施，尽管其各种变体在书店和万维网上随处可见。④如今已不可能再出现像沃斯·萨万特那样的超高分数，因为现在的计分方式是基于同龄人群体的统计分布，而不再是简单地将心理年龄除以实际年龄再乘以100⑤其他标准化考试，如学术能力评估测试（SAT）和研究生入学考试（GRE），也涵盖了智商测试的主要方面。

P4 ① Such standardized tests may not assess(评估) all the important elements(因素) necessary to succeed in school and in life, argues(认为) **Robert J. Sternberg**([人名]罗伯特J.斯顿伯格). ② In his article "How Intelligent(明智的) Is Intelligence(智力) Testing?", Sternberg notes that traditional tests best assess(评估) analytical(分析的) and verbal(语言的) skills but **fail to**(未能) measure creativity and practical knowledge, components(因素) also **critical to**(对…至关重要) problem solving(解决) and life success. ③ Moreover(此外), IQ tests do **not necessarily**(不一定) predict(预测) so well once populations or situations change. ④ Research has found that IQ predicted(预测)

①罗伯特·J·斯滕伯格认为，这类标准化测试未必能考察出在学业和人生中取得成功所需的全部重要因素。②斯滕伯格在其文章《智力测试到底有多聪明？》中指出，传统测试最擅长考察分析能力和语言能力，却无法衡量创造力和实用知识，而这两者同样是解决问题和获得人生成功的关键要素。③此外，一旦测试对象或情境发生变化，智商测试的预测效力也未必依然可靠。④研究发现，在低压力条件下进行测试时，智商能够预测领导能力；但在高压力条件下，智商与领导能力则呈负相关

leadership skills when the tests were given under low-stress conditions, but under high-stress conditions, IQ **was** negatively **correlated with** leadership—that is, it predicted the opposite. ⑤ Anyone who has **toiled through** SAT will testify that test-taking skill also matters, whether it's knowing when to guess or what questions to skip.

果。⑤任何苦战过SAT的人都会证明，应试技巧同样重要——无论是懂得何时该猜答案，还是哪些题目该跳过。

Q1. Which of the following may be required in an intelligence test? 细节题

[A] Answering philosophical questions.

[B] Folding or cutting paper into different shapes.

[C] Telling the differences between certain concepts.

[D] Choosing words or graphs similar to the given ones.

智商测试可能需要下列哪项？

A.回答哲学问题

B.把纸折叠或剪裁成不同的形状

C.区分某些概念的不同

D.根据所给词汇或图片选择近义词或类似图片

Q2. What can be inferred about intelligence testing from Paragraph 3? 推理题

[A] People **no longer** use IQ scores as an indicator of intelligence.

[B] More versions of IQ tests are now available on the Internet.

[C] The test contents and formats for adults and children may be different.

[D] Scientists have defined the important elements of human intelligence.

从第3段中，我们可以推断出有关智商测试_____。

A.人们不再使用智商分数作为智力的标准

B.现在互联网上可以获得更多版本的智力测试

C.成人和儿童使用的智力测试的内容和形式可能不同

D.科学家已经明确了人类智力中的重要成分

Q3. People nowadays can no longer achieve IQ scores as high as Vos Savant's because_____. 细节题

[A] the scores are obtained through different computational procedures

[B] creativity **rather than** analytical skills is emphasized now

[C] vos Savant's case is an extreme one that will not repeat

[D] the defining characteristic of IQ tests has changed

现在，人们不再取得像沃斯·萨文特那样高的智商分数，是因为_____。

A.采取了不同的计分方法获取分数

B.现在更强调创造能力而不是分析能力

C.沃斯·莎凡特是一个不会再现的极端的例子

D.智力测试的特征已经改变

Q4. We can conclude from the last paragraph that_____. 推理题

[A] test scores may not be reliable indicators of one's ability

[B] IQ scores and SAT results are highly correlated

[C] testing involves a lot of guesswork

[D] traditional tests are **out of date**

从最后一段中，我们可以总结得出_____。

A.测试的分数可能不是一个人能力的可靠指标

B.智力测试的分数和SAT考试的分数高度相关

C.测试中含有相当多的猜测成分

D.传统考试已经过时

Q5. What is the author's attitude towards IQ tests? 态度题

[A] Supportive

[B] Skeptical

[C] Impartial

[D] Biased

作者对智商测试的态度是____。

A.支持的

B.怀疑的

C.公正的

D.偏见的
